 **AMI - Advanced Machine Intelligence** has just closed one of the most significant and selective AI funding rounds of the decade, raising over \$1B to build the next generation of machine intelligence.

We are pleased and proud that **Founders Future** is among the very small group of investors selected to participate in this landmark round, reinforcing our commitment to backing the most ambitious technological breakthroughs in artificial intelligence.

 The co-founders bring together world-leading scientific expertise and proven company-building experience. AMI (Advanced Machine Intelligence) is chaired by **Yann LeCun**, Turing Award laureate and pioneer of modern AI and led by CEO **Alex LeBrun**, serial AI entrepreneur, Chief Science Officer **Saining Xie**, a leading researcher in visual representation learning, Chief Research & Innovation Officer **Pascale Fung**, a pioneer in human-centered AI, VP of World Models **Michael Rabbat**, a leading researcher in world models, and COO **Laurent Solly**, who brings deep experience in global technology operations.

Their ambition is to tackle one of the deepest challenges in AI: enabling machines to understand and predict the real world. While today's generative models excel in language and static data, real-world environments remain continuous, noisy, and unpredictable.

AMI is developing world models capable of learning abstract representations of real-world sensor data, opening the path to a new generation of AI systems designed for environments where reliability, safety, and control are essential, from robotics and industrial systems to healthcare and wearable technologies.

The company has assembled an exceptional team of scientists and engineers from institutions such as **Google DeepMind**, **Meta**, and **xAI**.

 Being invited to join this highly selective round led by **Cathay Innovation**, **Greycroft**, **Hiro Capital**, **HV Capital**, Bezos Expeditions alongside a group of long-term global investors and strategic backers, including **Temasek**, **NVIDIA**, **SBVA**, Groupe Industriel Marcel Dassault, **ZEBOX Ventures** (CMA CGM) and many others reflects our conviction that the next wave of value creation in AI will come from foundational scientific breakthroughs.

We are honored to support Yann, Alexandre, and the AMI team in building what could become one of the defining AI platforms of the coming decade.

Marc Menasé, **Sophie Duval**, **Matthieu Benkerant**, **Louis Sautet**, **Guillaume Simonaire**
