Excited to join AMI's \$1B seed round!

Most AI today predicts the next token.
But the real world runs on cause and effect.

Generative architectures trained with self-supervised learning have unlocked extraordinary capabilities such as search, summarization and coding.

But factories, hospitals, and robots operating in open environments need something different.

To operate in the real world, AI must understand how environments evolve and how actions shape outcomes.

That's the promise of World Models, the next chapter of the AI revolution.

By learning abstract representations of the real world and predicting consequences of actions, World Models enable systems that can reason, plan, and operate safely.

Preparing PDF, your download will begin shortly.
