Building at AMI & Nabla

9h ·

I am thrilled to announce that I am joining **Yann LeCun** and an exceptional founding team to lead **AMI - Advanced Machine Intelligence** as CEO.

We have secured a \$1.03 billion USD (approximately €890 million) seed round to fuel our mission to build intelligent systems capable of truly understanding the real world—a long-term scientific endeavor.

Having spent 24 years building AI products—including work on chatbots (VirtuOz, 2002), natural language understanding (**Wit.ai**, 2012), Facebook's M assistant (2015), and healthcare AI (Nabla, 2019)—I have witnessed the strengths and, crucially, the limitations of machine learning methodologies.

While the solutions we've shipped have (I hope) had a positive impact and helped people, they all relied on "shortcuts". Generative architecture trained by self-supervised learning *mimic* intelligence; they don't genuinely understand the world. Predicting tokens, though powerful, works best for discrete and low-dimensional tasks like information retrieval, summarization, coding, and mathematics.

However, factories, hospitals, and robots operating in open environments demand AI that grasps reality. And reality is not tokenized: it's continuous, noisy and high-dimensional. Despite their immense power, I do not believe that generative architectures are the path to achieving this true understanding.

It is time to move beyond shortcuts and work on a foundational solution. **World models** learn abstract representations of real-world data, ignoring unpredictable details, and make predictions in representation space.

Action-conditioned world models allow agentic systems to predict the consequences of their actions, and to plan action sequences to accomplish a task, subject to safety guardrails.

AMI will advance AI research and develop applications where reliability, controllability, and safety really matter, especially for industrial process control, automation, wearable devices, robotics, healthcare, and beyond.

Nabla is AMI's first partner. Nabla's customers will gain early access to our next-generation world models research, which will complement LLMs, strengthening our strategy to build safe, reliable, and clinically meaningful AI systems for healthcare.

I will be transitioning from CEO of Nabla to Chief AI Scientist and Chairman, continuing to work closely with my co-founders **Martin Raison** **Delphine Groll** **Laurent Landowski** and the incredible team that has already made a profound impact on millions of physicians and patients.

If AMI's mission resonates with you, we invite you to join us on this journey!

Real world. Real intelligence.
